*)Abraham Gutman @abgutman

A Philly health worker recalled telling a monkeypox patient to isolate for up to 4 weeks.

"They just broke down," she said, noting they were worried about how they could afford to miss work.

"This could have been prevented if they had the vaccine."

*)2 monkeypox deaths have been confirmed in #Spain and 1 in #Brazil. These are the first deaths outside of Africa. As cases grow, we will see a wider spectrum of dz presentations, complications and even more deaths. This only stops if we work to contain the ongoing outbreak.
